# LÜTZE PANELCON® KEYSTONE

## Modular communication interface with a wide range of industrial modules

The LÜTZE PANELCON Keystone System, with a mounting size of PG 21, is designed for creating high-quality and industrial-grade connection points and service interfaces in control and operator panels. These modules come in a very compact design and a high protection rating of IP 69K. Thanks to a transparent hinged cover, the interface below is easily visible at a glance. The hinged cover can be securely locked with a lead seal at around 110°, providing unobstructed access to the interface.

Keystone inserts are available with either straight or angled cable outlets. The angled version, where the cable exits sideways, offers the advantage of an installation depth of only 30 mm. This angled installation variant can be used in very flat panels as well.

**Highlights:**

- Very compact and durable design
- Reliable industrial-grade service interfaces for control panels and operating panels
- The very broad range of Keystone modules allows optimal adaptability for the right connection points for your application
- High protection class IP69K
- Identified by a tag holder
- Easy installation
- Can be sealed with a lead seal
- The underlying interface is visible through a transparent lid

Interface USB 3.1 C, Straight cable outlet, Part No. 493120

Interface HDMI, Straight cable outlet, Part No. 493090
