

LASER WITH RED DOT

MODEL

1570881

PRODUCT DESCRIPTION

Model 1570881 is a laser with a diameter of 12 mm and a housing length of 32 mm. This laser is powered by 24V and creates a red laser dot. The 1570881 laser has an adjustable focus depending on the distance to the target. The laser has an IP class and temperature range that allows it to be used in moist, cold or warm environments. It can be used in many different applications, for example positioning tools, machines and vehicles. This laser ensures quality in various processes where the position is important or serves as a support or guide for the person handling the machine or vehicle.

TECHNICAL DATA
